Professional Summary

Software engineer and Machine Learning master's student at CMC MSU with production experience at X5 Tech. Built Python services using FastAPI, PostgreSQL, and Kubernetes; developing AI product search and catalog-processing pipelines for Korzina.

Technical Skills

Product and Delivery: end-to-end ownership from problem to production, shipping fast with simple designs, production monitoring (Grafana), experimentation and A/B testing, code review, Claude Code (daily), Git, GitLab CI/CD
Languages: Python, TypeScript, SQL, Go, C++
Backend: FastAPI, REST APIs, SQLAlchemy (async), Alembic, Pydantic, pytest, asyncio, httpx, Apache Kafka
Frontend: React, TypeScript
Data and Infrastructure: PostgreSQL, Redis, Docker, Kubernetes (K8s), Helm
Applied AI: Large Language Models (LLM), agentic workflows, prompt engineering, RAG, LangChain, OpenAI API, OCR (Optical Character Recognition)
Spoken languages: Russian — Native, English — B2

Work Experience

Software Engineer (Junior) | X5 Tech (X5 Group, Russia's largest grocery retailer), Logistics Solutions Department, Moscow | October 2026 — Present

- Developing the system that handles 90% of all foreign supplies X5 Retail Group purchases for its retail chains.

Machine Learning Developer (Intern) | X5 Tech, AI Agents Department, Moscow | April 2026 — October 2026

- Built an agentic LLM workflow for contract review end to end: FastAPI and PostgreSQL backend, React and TypeScript frontend, multi-agent pipeline on LangChain (document processing, requisite extraction, counterparty and property checks, risk analysis, legal opinion). Shipped to production and owned it there: over 500 reviews in May–August 2026, a legal opinion in 8–19 minutes instead of about 97 minutes of manual lawyer work, 8 FTE saved.
- Owned production: Kubernetes dev and prod via Helm and GitLab CI/CD, per-agent latency metrics in Grafana, request budgets and timeouts for minute-long OCR and LLM calls.
- Shipped an OCR and LLM service that reads foreign invoices for X5 Tech: from first commit in June 2026 to dev and prod deployment and a pilot in August 2026.
- Developed the FastAPI backend for utility-bill processing: OCR results consumed from Apache Kafka, stored and served to the frontend; 10 FTE saved.

Projects

Korzina — Marketplace and AI Product Search | TypeScript, Node.js, PostgreSQL, React | September 2026 — Present

- Building a Telegram Mini App and bot with a catalog of 100,000+ products; automated supplier-data ingestion, normalization, and deduplication.
- Implemented PostgreSQL full-text and trigram search; developing a hybrid retrieval prototype combining multimodal Gemini embeddings, pgvector, reciprocal rank fusion (RRF), and Qwen reranking.
- Implemented LLM/VLM attribute extraction and product-compatibility checks in the prototype, with versioned embedding caches, concurrent-request deduplication, and incremental refresh.
- Built offline relevance evaluation with frozen datasets, qrels, Recall@20, and Precision@5; compared text and multimodal retrieval under model-cost and latency constraints.
- Built the Fastify API and background jobs; deployed the service using PostgreSQL, Valkey, S3, Docker, and GitLab CI/CD.

Other projects: AxiomAI: LLM-powered Telegram bot, 80% reduction in manager workload; WB Parser: Wildberries parser and Mini App, 220 users; Placa: analytics for 300 sellers.

Education

Lomonosov Moscow State University, Bachelor's degree in Computer Science | Faculty of Computational Mathematics and Cybernetics (CMC) | August 2022 — August 2026

Lomonosov Moscow State University, Master's degree | Faculty of Computational Mathematics and Cybernetics (CMC), Machine Learning | September 2026 — Present

- Summer School on A/B Testing, X5 Tech — Summer 2026 (certificate no. 9074503).
- Deep Learning School (DLS), Computer Vision and NLP tracks — MIPT School of Deep Learning.
