Education

Lomonosov Moscow State University, Master's degree in Machine Learning | Faculty of Computational Mathematics and Cybernetics (CMC), Department of Mathematical Methods of Forecasting | September 2026 — Expected 2028

Lomonosov Moscow State University, Bachelor's degree in Computer Science | Faculty of Computational Mathematics and Cybernetics (CMC); GPA: 3.9/4.0 | August 2022 — August 2026

- Additional training: Deep Learning School, MIPT (Computer Vision and NLP); X5 Tech Summer School on A/B Testing, 2026.

Work Experience

Software Engineer (Junior) | X5 Tech, Logistics Solutions Department, Moscow | October 2026 — Present

- Developing the logistics system that handles 90% of X5 Retail Group's foreign supplies for its retail chains.

Software Engineer (Intern) | X5 Tech, AI Agents Department, Moscow | April 2026 — October 2026

- Built and deployed a Python/FastAPI contract-review service with PostgreSQL and parallel document analysis; processed over 500 production reviews in May–August 2026 and reduced legal-opinion preparation time from approximately 97 minutes to 8–19 minutes.
- Implemented per-request execution budgets and timeouts for long-running OCR and LLM calls, with per-agent latency monitoring in Grafana.
- Developed a FastAPI backend for utility-bill processing: consumed OCR results from Apache Kafka, stored processed data, and exposed it to the frontend; business impact equivalent to 10 FTE.
- Shipped an OCR and LLM service for foreign invoice analysis: from first commit in June 2026 to development and production deployments and a pilot in August 2026.
- Deployed services to development and production Kubernetes environments using Docker, Helm, and GitLab CI/CD.

Technical Skills

Programming: Python, C++, SQL, Go
C++: STL containers, algorithms and iterators; object-oriented programming; pointers and references; RAII and smart pointers; templates; move semantics
Computer science and engineering: data structures and algorithms, asynchronous programming, REST API design, relational data modeling, testing (pytest), code review
Backend and data: FastAPI, asyncio, SQLAlchemy, Alembic, PostgreSQL, Redis, Apache Kafka
Infrastructure: Linux, Docker, Kubernetes, Helm, GitLab CI/CD, Grafana, Git
Applied AI: LangChain, LLM workflows, RAG, BM25, OCR, OpenAI API
Spoken languages: Russian — Native; English — B2

Projects

Korzina — Marketplace and AI Product Search | TypeScript, Node.js, PostgreSQL, React | September 2026 — Present

- Building a Telegram Mini App and bot with a catalog of 100,000+ products; automated supplier-data ingestion, normalization, and deduplication.
- Implemented PostgreSQL full-text and trigram search; developing a hybrid retrieval prototype combining multimodal Gemini embeddings, pgvector, reciprocal rank fusion (RRF), and Qwen reranking.
- Implemented LLM/VLM attribute extraction and product-compatibility checks in the prototype, with versioned embedding caches, concurrent-request deduplication, and incremental refresh.
- Built offline relevance evaluation with frozen datasets, qrels, Recall@20, and Precision@5; compared text and multimodal retrieval under model-cost and latency constraints.
- Built the Fastify API and background jobs; deployed the service using PostgreSQL, Valkey, S3, Docker, and GitLab CI/CD.

Other projects: AxiomAI: LLM-powered Telegram bot, 80% reduction in manager workload; WB Parser: C++ parser and Telegram Mini App, 220 active users; Placa: analytics for 300 sellers.
