Professional Summary

Software engineer who ships products used by real customers and follows them into production. At X5 Tech I built an agentic LLM workflow for contract review end to end (Python and FastAPI backend, React and TypeScript frontend, PostgreSQL, Kubernetes) and own it in production: over 500 reviews, a legal opinion in 8–19 minutes instead of about 97, 8 FTE saved. Before that I shipped three products on my own: Google Sheets analytics used daily by about 300 sellers, a Telegram Mini App with 220 active users, and an OpenAI-powered bot that cut manager workload by 80%. I use Claude Code daily as a force multiplier and stay accountable for the result. Interested in the AI Growth team: customer-facing AI, internal automation, experimentation. CS bachelor's from CMC MSU; English B2.

Technical Skills

Product and Delivery: end-to-end ownership from problem to production, shipping fast with simple designs, production monitoring (Grafana), experimentation and A/B testing, code review, Claude Code (daily), Git, GitLab CI/CD

Languages: Python, TypeScript, SQL, Go, C++

Backend: FastAPI, REST APIs, SQLAlchemy (async), Alembic, Pydantic, pytest, asyncio, httpx, Apache Kafka

Frontend: React, TypeScript

Data and Infrastructure: PostgreSQL, Redis, Docker, Kubernetes (K8s), Helm

Applied AI: Large Language Models (LLM), agentic workflows, prompt engineering, RAG, LangChain, OpenAI API, OCR (Optical Character Recognition)

Spoken languages: Russian — Native, English — B2

Work Experience

Machine Learning Developer | X5 Tech (X5 Group, Russia's largest grocery retailer), AI Agents Department, Moscow | April 2026 — Present

- Built an agentic LLM workflow for contract review end to end: FastAPI and PostgreSQL backend, React and TypeScript frontend, multi-agent pipeline on LangChain (document processing, requisite extraction, counterparty and property checks, risk analysis, legal opinion). Shipped to production and own it there: over 500 reviews in May–August 2026, a legal opinion in 8–19 minutes instead of about 97 minutes of manual lawyer work, 8 FTE saved.
- Own production: Kubernetes dev and prod via Helm and GitLab CI/CD, per-agent latency metrics in Grafana, request budgets and timeouts for minute-long OCR and LLM calls.
- Shipped an OCR and LLM service that reads foreign invoices for the X5 Import business unit: from first commit in June 2026 to dev and prod deployment and a pilot in August 2026.
- Developed the FastAPI backend for utility-bill processing: OCR results consumed from Apache Kafka, stored and served to the frontend; 10 FTE saved.

Products Shipped to Real Customers (solo)

AxiomAI (OpenAI-powered Telegram bot) | github.com/noobmaster-ru/axiomai | October 2025 — April 2026

- Bot for a business's customer communications on aiogram, OpenAI API, PostgreSQL, Redis and Docker; reduced manager workload by 80%.

WB Parser | github.com/noobmaster-ru/tg-mini-app-backend | July 2025 — September 2025

- Wildberries search-results parser delivered as a Telegram Mini App with frontend, backend and database; 220 active users.

Placa | github.com/noobmaster-ru/wb_tables | July 2024 — December 2024

- Google Sheets analytics for Wildberries sellers: self-service Google Apps Script template with Wildberries API integration and daily automated loads; about 300 sellers use it daily.

Education

Lomonosov Moscow State University, Bachelor's degree in Computer Science | Faculty of Computational Mathematics and Cybernetics (CMC) | August 2022 — August 2026

Lomonosov Moscow State University, Master's degree | Faculty of Computational Mathematics and Cybernetics (CMC), Machine Learning | September 2026 — Present

- Summer School on A/B Testing, X5 Tech — Summer 2026.
- Deep Learning School (DLS), Computer Vision and NLP tracks — MIPT School of Deep Learning.
